

Carboy Re-Use

Environmental Health & Radiation Safety (EHRS) consolidates most of the liquid chemical waste that are generated on the Main and Health Science Center (HSC) campuses. The containers that held liquid chemical waste are emptied into drums and then rinsed within the EHRS designated Central Accumulation Areas (CAA) on both the main and HSC campuses. Whenever, EHRS empties and rinses 5-gallon carboys that are suitable for reuse, they are returned to the general stock for reuse as a chemical waste storage container. Any questions regarding this program, please contact EHRS at (215)-707-2520
